Project Experience

Crypto-Currency Application

Technology Stack – React, Ant Design Library, Redux Toolkit and some public APIs

➢ I built a web application that keeps you updated with the latest news and information about crypto-currencies

➢ It features a home page, news page, crypto-details page and a crypto currency page. All these were linked using the React-router DOM

➢ For this project I was able to practicalize working more with ReactJS and Redux. I also learnt and practiced different ways to make API calls:

E-Commerce API

Technology Stack - NodeJS, ExpressJS, MongoDB, CryptoJS Hashing Library, Stripe and JWT

➢ Developed a fully functional API that can be used with an E-commerce web UI, and also an Admin Dashboard.

➢ It contains several routes and endpoints including: User route, Product route, Stripe route Order route etc.

➢ It also comes with an Authentication and a verification route (using JWT) that handles user login and verifies user token validation

QR-Code Generator

Technology Stack – Vanilla Javascript, HTML, Tailwind CSS, a QR-Code Library

➢ I developed and deployed a functional QR-Code web application that is used to generate a unique and downloadable QR-code image for any valid URL

➢ It is a single page application that features an input field for users to input their URL, a Generate button that handles the QR Code generation process, a saved image button that can be used to download the image.

BLOG API

Technology Stack - NodeJS, ExpressJS, MongoDB, ByCrypt Hashing Library

➢ I developed this API using the technologies listed above and it comes with the full functionality of a Blogging application

➢ It contains multiple routes which includes : User route that is used to update and modify user information, a Categories route that is used to fetch post depending on the selected category, a Post route that can be used to create, update, delete and get posts.

➢ It also includes an Authentication route that handles user signup and login processes.

Skills

Programming Languages

JavaScript (ES6), HTML,CSS/Sass, MongoDB

Libraries & Frameworks

React, Node.js,Express, Mongoose

Tools & Platforms

Git, Netlify, Heroku, GitHub, Postman, React Testing Library, Jest, Axios, Google AUTH, Redux Toolkit, ContextAPI, Firebase

Education

University of Port Harcourt

2018 - present // Rivers State, Nigeria

Bachelor of Engineering in Electrical/ Electronics Engineering

Profile

My name is Tonie and I create functional web applications. I've spent the last few months working on various projects and I'm focused on using my skillset and experience to develop real world digital products for consumers.

I am passionate about using the post effective and efficient approaches to solve problems.

I am a goal driven individual and an excellent team player and I'm excited to make the leap and continue refining my skills with the right company.

Interests

Football and Basketball, Music, Movies, Biking and Analyzing the financial market
